How Did I Get There?

Food Addiction

Conclusion

The current study provides preliminary evidence that not all foods are equally implicated in addictive-like eating behavior, and highly processed foods, which may share characteristics with drugs of abuse (e.g. high dose, rapid rate of absorption) appear to be particularly associated with “food addiction.”

Which Foods May Be Addictive? The Roles of Processing, Fat Content, and Glycemic Load

Abstract

Objectives

We propose that highly processed foods share pharmacokinetic properties (e.g. concentrated dose, rapid rate of absorption) with drugs of abuse, due to the addition of fat and/or refined carbohydrates and the rapid rate the refined carbohydrates are absorbed into the system, indicated by glycemic load (GL). The current study provides preliminary evidence for the foods and food attributes implicated in addictive-like eating.

Results, Study Two used hierarchical linear modeling to investigate which food attributes (e.g., fat grams) were related to addictive-like eating behavior (at level one) and explored the influence of individual differences for this association (at level two).

Which Foods Are Addictive?

Food	Rating	GL	Fat (g)	Sodium (mg)
Pizza	4.01	22	10	551
Chips	3.73	12	10	160
Cheeseburger	3.51	17	28	885
Cheese	3.22	0	9	174
Fried Chicken	2.97	7	26	441
Bacon	3.03	0	12	647

Prevalence of food addiction in children and adolescents: A systematic review and meta-analysis

Mir Saeed Yekaninejad, Negin Badrooj, Fardis Vosoughi, Chung-Ying Lin , Mac N. Potenza, Amir H. Pakpour ,

3.4 Food addiction prevalence

Prevalence of FA as determined using the YFAS-C has been reported in 18 publications^{24, 28-32, 34-39, 41, 42, 45-48} (Table 2). The meta-analysis estimated an overall FA prevalence at 15% (95% CI: 11–19%) among children and adolescents, with an I^2 of 95.64%. Moreover, the prevalence in the community samples was 12% (95% CI: 8–17%) and 19% (95% CI: 14–26%) in the overweight/obese samples (Figure 6).

Scale for Children and Adolescents (YFAS-C), has been developed and used to estimate FA prevalence among pediatric populations. The present systematic review and meta-
